Summary

AI & Data Science engineer with hands-on Forward Deployed Engineering experience shipping production AI agents directly into customer workflows. Specializes in prompt engineering and conversational AI agent design for real-world deployment, with an applied ML/NLP background.

Experience

Forward Deployed Engineer — ExtraaEdge Technology Solutions Pvt. Ltd. *Apr 2026 – Present*

Bangalore, India

- Designed and deployed AI voice-calling agents (VidyaCall) for higher-education clients, from prompt design through live-call testing.
- Built multi-language conversational flows, including Hindi and Kannada, for lead-qualification calls.
- Tested deployed agents against per-institution QA rubrics and revised prompts based on findings.
- Built a multi-tenant RAG chatbot for institution admissions enquiries, grounding LLM answers in each institution's own knowledge base and pushing chat conversations into the CRM.

Projects

Suspect Image Generator (SUIGEN)

- Developed SUIGEN, a Generative AI system using Stable Diffusion and Transformer models to generate and modify suspect facial images for criminal identification.
- Improved forensic workflows by enabling high-accuracy facial reconstruction from descriptive or partial inputs, reducing manual effort and boosting identification speed.

Sentiment Analysis Tool and User Review Navigation (SATURN)

- Built SATURN, a real-time sentiment analysis tool using NLP and ML to classify social media sentiments.
- Developed data preprocessing and classification models to extract insights from user-generated content.

Curative Diagnostic Tool for Paediatric Anaesthesia Dosages (Nischethana Sahayaka)

- Developed an Android mobile app in Java to assist pediatric anesthesiologists with rapid and accurate critical drug dosage calculations.
- Designed a user-friendly interface enabling quick access to essential patient data and medication guidelines in emergency care scenarios.

Education

Bachelor of Engineering *2022 – 2026*

BGS College of Engineering and Technology — specialized in Artificial Intelligence and Data Science

Awards and Achievements

- Secured Second Place in the Hackathon organized by SVIT College of Engineering; project qualified for the Foundation for Advancement of Education and Research.
- Research papers published/accepted: SATURN (ICIAH 2025, Springer) and Pediatric Anesthesia Dosage Calculation Tool (ICKES 2022, IEEE Xplore).
- Represented college in VTU South Zone level Chess.

Key Skills

- AI Agent & Prompt Engineering: conversational flow design, multi-language agent tuning, LLM system-prompt design, production QA/evaluation, RAG (retrieval-augmented generation)
- Programming & Core CS: Java, Python, C, SQL, DBMS, Data Structures and Algorithms (DSA)
- Machine Learning & NLP: Scikit-learn, NumPy, Pandas, Matplotlib, NLTK
- Generative AI & Deep Learning: Stable Diffusion, Transformer architectures, model fine-tuning workflows
- Mobile & Data Tools: Android Studio, Tableau, Power BI, Advanced Excel

Certifications

- ML for Engineers, Data Science & Analytics using Python — NPTEL | Gen AI Workshop — upGrad | Intro to Snowflake — Coursera | Prompt Design in Vertex AI — Google Cloud | ML Foundations — Coursera
